## PREFACE

The primary geographical classification used by the Australian Bureau of Statistics (ABS) to disseminate statistical data for the 2001 Census of Population and Housing is the Australian Standard Geographical Classification (ASGC) 2001. However, the ABS will also release data for a number of geographic areas that are outside the scope of the ASGC. These are called Census Geographic Areas.

This publication provides an essential reference for understanding and interpreting the geographical context for ABS statistics published on the Census Geographic Areas.

The Census Geographic Areas described in this publication include: Commonwealth and State Electoral Divisions, Postal Areas, State Suburbs, Journey to Work Areas and the Australian Indigenous Geographical Classification (AIGC). With the exception of the Journey to Work Areas, all the geographic areas are based upon aggregations of the ASGC 2001 Census Collection Districts (CDs). This publication describes the concepts underlying each of the Census Geographic Areas and lists their codes and names.

The date of effect of the Census Geographic Areas described in this publication is 7 August 2001.

This publication is part of a three volume set of statistical geography publications relating to the 2001 Census of Population and Housing. The other two volumes are *Statistical Geography Volume 1 Australian Standard Geographical Classification (ASGC)* (Cat. no. 1216.0) and *Statistical Geography Volume 3 Australian Standard Geographical Classification (ASGC) Urban Centres/Localities* (Cat. no. 2909.0).

Any enquiries regarding the Census Geographic Areas, or suggestions for improvement, can be made by contacting the Assistant Director (Census Geography) on telephone Canberra 02 6252 7214, facsimile 02 6252 8666, email <geography@abs.gov.au> or by writing to Locked Bag 10, Belconnen, ACT 2616.

For details of other 2001 Census Geographic Products and Services, please refer to the *2001 Directory of Census Statistics* (Cat. no. 2910.0). Alternatively, please contact the ABS National Information and Referral Service on telephone 1300 135 070, facsimile 1300 135 211 or email <client.services@abs.gov.au>.

D. Trewin  
Australian Statistician

## CHAPTER 1

## INTRODUCTION

### PURPOSE

The main purpose of the Australian Standard Geographical Classification (ASGC) and the Census Geographic Area Classifications is to provide a framework for the collection and dissemination of geographically classified statistics. These are statistics with a 'where' dimension. This publication briefly describes all of these classifications but provides details only on the Census Geographic Areas.

Full details of the ASGC structures are provided in *Statistical Geography Volume 1 Australian Standard Geographical Classification (ASGC)* (Cat. no. 1216.0) and *Statistical Geography Volume 3 Australian Standard Geographical Classification (ASGC) Urban Centres/Localities* (Cat. no. 2909.0).

### ASGC

The ASGC is the primary geographical classification used by the ABS. It provides a common framework of statistical geography in both census and non-census years thereby enabling the production of statistics which are comparable and can be spatially integrated. It is a hierarchical classification system consisting of seven interrelated structures each designed to serve a specific purpose. The spatial units of some structures (the Main, Statistical Region, Section of State and Remoteness) aggregate to cover the whole of Australia, while the remaining structures (the Local Government Area, Statistical District and Urban Centre/Locality) cover only a part of Australia.

### SPATIAL UNITS OF THE ASGC

The spatial units of the ASGC are as follows:

- Census Collection District (CD);
- Statistical Local Area (SLA);
- Statistical Subdivision (SSD);
- Statistical Division (SD);
- State and Territory (S/T);
- Statistical District (S Dist);
- Local Government Area (LGA);
- Statistical Region Sector (SRS);
- Statistical Region (SR);
- Major Statistical Region (MSR);
- Urban Centre/Locality (UC/L);
- Section(s) of State (SOS); and
- Remoteness Area (RA).

## CENSUS GEOGRAPHIC AREAS

The Census Geographic Areas described in this publication have been created so that census data may be made available for commonly used geographic areas other than those found in the ASGC. With the exception of the Journey to Work Destination Zones (JTWDZNPs), all Census Geographic Areas are formed by an aggregation of whole CDs. The CD is the smallest spatial unit of ASGC geography and is only defined in a census year. Census Geographic Areas are also defined only in a census year.

For the 2001 Census, the Census Geographic Areas are comprised of six separate classifications and spatial units as follows:

- Commonwealth Electoral Division (CED);
- State Electoral Division (SED);
- Postal Area (POA);
- State Suburb (SSC);
- Australian Indigenous Geographical Classification (AIGC);
  - Aboriginal and Torres Strait Islander Commission (ATSIC) Region (AREG);
  - Indigenous Area (IARE);
  - Indigenous Location (ILOC);
- Journey to Work
  - Journey to Work Study Area (JTWSAP); and
  - Journey to Work Destination Zone (JTWDZNP).

## SUMMARY TABLES

Table 1 summarises the various ASGC structures and their component spatial units.

Table 2 summarises the number of ASGC spatial units and Census Geographic Areas.

# 1

## SUMMARY OF ASGC STRUCTURES

<i>ASGC Structure</i>	<i>Hierarchical levels</i>	<i>Component spatial units</i>	<i>Covers whole of Australia?</i>
Main	5	CD,SLA,SSD,SD,S/T	Yes
Statistical District	4	CD,SLA,SSD,S Dist	No
Local Government Area	4	CD,SLA,LGA,S/T(a)	No
Statistical Region	6	CD,SLA,SRS,SR,MSR,S/T	Yes
Urban Centre/Locality	2	CD,UC/L	No
Section of State	3	CD,SOS,S/T	Yes
Remoteness	3	CD,RA,S/T	Yes

(a) Only that part of the S/T which comes under the responsibility of an incorporated Local Government Council or selected Community Government Councils.

## 2

## COUNTS FOR AUSTRALIAN STANDARD GEOGRAPHICAL CLASSIFICATION AND CENSUS SPECIFIC GEOGRAPHIC AREAS

Spatial unit		NSW	Vic.	Qld	SA	WA	Tas.	NT	ACT	OT(a)	Aust.
AUSTRALIAN STANDARD GEOGRAPHICAL CLASSIFICATION (EFFECTIVE 1 JULY 2001)											
S/T	State/Territory	1	1	1	1	1	1	1	1	1	9
SD	Statistical Division(b)	13	12	12	8	10	5	3	2	1	66
SSD	Statistical Subdivision(b)	50	46	31	21	29	9	12	8	1	207
SLA	Statistical Local Area(b)	199	200	454	125	156	44	65	107	3	1 353
	No. SLAs in Capital City SD	49	75	224	54	37	8	39	106	—	592
LGA	Local Government Area(c)	175	79	126	69	143	30	9	1	1	633
S Dist	Statistical District(d)	13	8	10	n.a.	4	2	n.a.	1	n.a.	35
MSR	Major Statistical Region	2	2	2	2	2	1	1	1	1	14
SR	Statistical Region	22	14	11	6	7	1	1	1	1	64
SRS	Statistical Region Sector	25	14	29	6	7	3	2	1	1	88
CD	Collection District (above CD counts include all Miscellaneous CDs)	11 706	8 642	7 184	3 173	4 407	1 072	498	515	12	37 209
	No. CDs in Capital City SD (Capital City CD counts include Miscellaneous CDs where applicable)	6 628	5 837	2 913	2 150	2 775	387	200	508	n.a.	21 398
RA	Remoteness Area(b)	6	5	6	6	6	5	4	2	2	42

CENSUS SPECIFIC GEOGRAPHIC AREAS (EFFECTIVE 7 AUGUST 2001)											
CED	Commonwealth Electoral Division(b)(e)(f)	51	38	28	13	16	6	3	2	2	157
SED	State Electoral Division(b)(e)	94	89	90	48	58	25	25	3	n.a.	432
SSC	State Suburb(e)(g)	754	421	1	374	308	120	47	1	1	2 027
POA	Postal Area(e)(h)	597	653	405	311	312	106	25	24	2	2 435
AREG	ATSIC Region(e)(i)(j)	7	3	9	4	10	2	8	1	2	37
IARE	Indigenous Area(j)(k)	170	43	124	35	105	17	70	3	3	563
ILOC	Indigenous Location(j)(k)	261	58	195	77	202	29	156	3	3	977
MISCELLANEOUS CDs (EFFECTIVE 1 JULY 2001)											
	Water CDs(l)	52	—	3	1	1	—	11	11	—	79
	Nil CDs(l)	5	95	39	14	513	1	32	3	—	702
	Off-Shore CDs(l)	1	1	1	1	1	(m)2	1	n.a.	n.a.	8
	Migratory CDs(l)	1	1	1	1	1	1	1	n.a.	n.a.	7
	Shipping CDs(l)	10	8	16	11	22	7	4	n.a.	n.a.	78

(a) Other Territories (OT) includes the Territories of Cocos (Keeling) Islands, Christmas Island and Jervis Bay.

(b) For each State and the NT, a code for Off-Shore, Shipping and Migratory CDs has been included.

(c) Includes a 9399 code Unincorporated State/Territory for each State/Territory.

(d) Statistical Districts can cross State/Territory borders. For the purposes of the above table, Statistical Districts that cross State/Territory borders are counted in each State/Territory (NSW 3, Vic. 1, Qld 1, ACT 1), but are counted only once in the Australia total.

(e) These Geographic Areas are derived on a 'best fit' basis of CDs to externally determined boundaries. They are often referred to as CD Derived Areas.

(f) The ACT Electoral Division of Fraser includes Jervis Bay and is counted in ACT and OT. The NT Electoral Division of Lingiari includes Christmas Island and Cocos (Keeling) Islands and is counted in NT and OT. Each is counted only once in the Australia total.

(g) State Suburb counts include an 'unclassified' suburb that occurs in each State/Territory as suburbs are only allocated for major population centres. It also includes Off-shore, Shipping and Migratory CDs. State Suburb boundaries are not allocated for Qld and ACT. However, SLA boundaries for major urban areas in Qld and the ACT approximate to suburbs.

(h) Includes the ABS assigned 'dump' postcode (x999) for each State/Territory. Postal Area boundaries may cross State/Territory borders, and are counted only once in the State/Territory of origin.

(i) The ATSIC Region, 01 'Queanbeyan', crosses State/Territory borders and as such is counted in NSW, ACT and OT. It is counted once only in the Australia total.

(j) Includes a single code for Off-Shore, Shipping and Migratory CDs for each State and the NT. It is counted once only in the Australia total.

(k) Parts of Jervis Bay Territory are incorporated in a NSW Indigenous Area and Indigenous Location. These Indigenous Areas and Indigenous Locations are counted in OT as well as in NSW. They are counted only once in the Australia total.

(l) These CDs are included in the counts for 'Collection District' and 'No. CDs in Capital City SD' in the Australian Standard Geographical Classification part of the table.

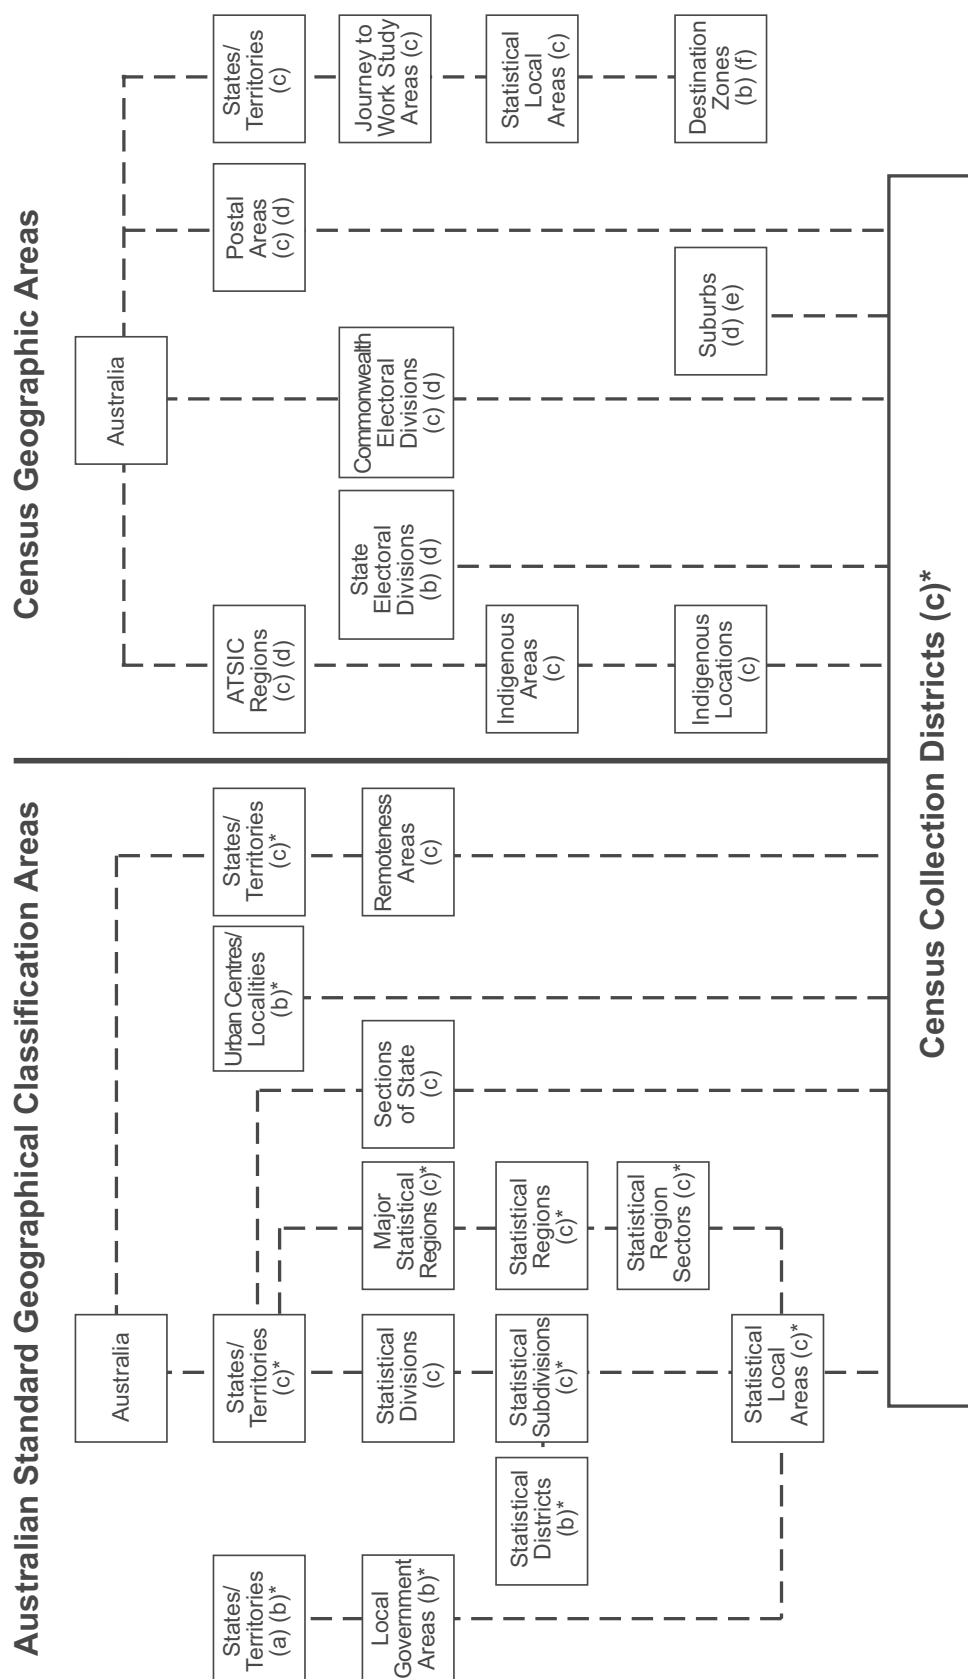

(m) The second Off-Shore CD represents Antarctica and Macquarie Island. Expeditioners in Australian Antarctic Territories and Macquarie Island are counted in the second Off-Shore CD.

Note: n.a. — not applicable

n.y.a. — not yet available

Source: 2001 Census Fact Sheet.

The diagram below shows how the Census Geographic Areas relate to each other and to the ASGC.

Note: (a) Incorporated areas only. (b) Cover part of Australia only. (c) Cover all of Australia. (d) Approximations created by aggregating Collection Districts (CDs). (e) Only available for specific areas within the specified States/Territories. (f) Destination Zones do not concord with CDs, but they do aggregate to Statistical Local Areas. (\*) Usual residence data are available at the CD level, and for aggregation of CDs.

## PRINCIPLES OF THE CENSUS GEOGRAPHIC AREA CLASSIFICATIONS

### Classification principles

Census Geographic Areas are constructed so that they fulfil practical user needs for spatial statistics while also conforming to general classification principles.

Census Geographic Areas are constructed according to the basic classification principles that members within one class are of the same type, classes are uniquely defined so as to be mutually exclusive and, in total, the members in each class cover the entire class.

As a result, the geographical spatial units of each of the Census Geographic Areas are:

- of the same type, delimited by well-defined criteria;
- defined by aggregation of whole CDs (except for JTWDZNPs);
- uniquely identified by codes and names (except Postal Areas);
- mutually exclusive; and
- in aggregate cover the whole area to which that hierarchy applies.

### Boundary formation

The Census Geographic Areas are designed for the provision of Census data for areas which are not appropriate for inclusion in the ASGC but which have particular significance for some groups of data users. Journey to Work and the AIGC are defined to facilitate the use of work-related transport data and Indigenous statistics respectively. The remaining Census Geographic Areas are approximations of administrative areas defined by an organisation other than the ABS. For example, CEDs are an approximation of the Electoral Divisions defined by the Australian Electoral Commission and POAs are an approximation of the postcodes defined by Australia Post. The Census Geographic Area is an approximation for use with census data but the original area as defined by AEC or Australia Post, etc. remains the official definition.

The CD is the smallest building block which serves the classification structures of both the ASGC and the Census Geographic Areas (see diagram 3, Chapter 1, p.4). Thus, Census Geographic Areas which approximate official administrative areas are created by allocating whole CDs to a particular official administrative area. A CD can only be assigned to one area in each Census Geographic Area classification. Thus, when CDs are completely contained within an official administrative area, they are allocated to the corresponding Census Geographic Area. However, when a CD shares area with more than one official administrative area, a decision must be made as to which area the CD should be allocated. This allocation is made on the basis of the administrative area which contains the majority of the CD's population. This means the ABS representation of the official administrative area will not match the exact size and shape of the official unit. The term used to describe the resulting ABS defined area is 'CD derived'. Once the spatial units have been derived, it is possible to provide census data for them by aggregating data for their component CDs.

User needs    The official administrative areas which are approximated in the Census Geographic Areas are chosen on the basis of demonstrated demands for statistics for these areas. However, other geographic areas not included in the Census Geographic Areas or the ASGC may be accommodated through customised services available for census data.

## CHAPTER 2

## COMMONWEALTH ELECTORAL DIVISIONS

### GENERAL DESCRIPTION

A Commonwealth Electoral Division is an area legally prescribed for the purpose of returning one member to the Federal Lower House of Parliament. The derived Census Geographic Areas which approximate these official areas are known as Commonwealth Electoral Divisions (CEDs). The boundaries and census statistics produced for CEDs are CD derived (based on the method described in Chapter 1, p.5). Boundaries are based upon the Electoral Divisions current at the Federal Election held on 11 November, 2001. CED boundaries are generally different to State Electoral Divisions (SEDs).

For the 2001 Census, 157 CEDs are defined to cover the whole of geographic Australia. CEDs do not generally cross State/Territory borders but there are two exceptions. Jervis Bay Territory is included in the Australian Capital Territory electorate of Fraser and the Territories of Christmas Island and Cocos (Keeling) Islands are included in the Northern Territory electorate of Lingiari.

### CED names and codes

CED names are the same as those allocated by the Australian Electoral Commission. The coding conventions for CEDs are as follows:

- CEDs are sorted by name and then allocated a two-digit code starting from 01 that is unique within each State/Territory. Unique Australia-wide identification of CEDs requires a three-digit code comprising State/Territory code (digit 1) and CED code (digits 2–3); and
- the CED code 99 is reserved for those States/Territories that have Shipping, Off-Shore Areas and Migratory CDs. CDs allocated to this code are not part of any official Electoral Division. They are provided as a balancing item for census statistics obtained for CEDs.

Example:

3 01 Blair  
3 02 Bowman  
3 03 Brisbane  
3 04 Capricornia  
3 05 Dawson  
3 06 Dickson  
...  
3 99 Off-Shore, Shipping & Migratory (Qld)

CEDs are renumbered after each census so the codes used for the 1996 Census may not necessarily match those used for the 2001 Census.

Please see Chapter 8, p.25 for a full listing of CED codes and names.

### Maintenance

CEDs are only defined in the census year. Thus, any boundary changes that occur in official electoral boundaries will not be reflected until the next census. However, CD based concordances will be produced as redistribution of Commonwealth Electoral boundaries become effective.

## CHAPTER 3

## STATE ELECTORAL DIVISIONS

### GENERAL DESCRIPTION

A State Electoral Division is an area legally prescribed for the purpose of returning one or more members to the State or Territory lower Houses of Parliament. The derived Census Geographic Areas which approximate these official areas are known as State Electoral Divisions (SEDs). The boundaries and census statistics produced for SEDs are CD derived (based on the method described in Chapter 1, p.5). Boundaries are based upon the Electoral Divisions current on Census night 7 August 2001.

For the 2001 Census, 432 SEDs are defined to cover the whole of geographic Australia (excluding territories of Jervis Bay, Christmas Island and the Cocos (Keeling) Islands). SEDs do not cross State/Territory borders.

### SED names and codes

SED names are the same as those allocated by the Electoral Commission in each State/Territory. All SEDs are sorted by name and then allocated a four-digit code. Unique Australia-wide identification of SEDs requires a five-digit code comprising State/Territory code (digit 1) and SED code (digits 2–5).

The SED code 9999 is reserved for those States/Territories that have Shipping, Off-Shore Areas and Migratory CDs. CDs allocated this code are not part of any official Electoral Division.

Some States and Territories have differing electoral arrangements. A summary of these differences and how they affect the SED classification is provided below:

<i>NSW</i>	New South Wales has two Houses of Parliament but only the Legislative Assembly (lower House) electoral districts are represented in the SED classification since the Legislative Council (upper House) is a single constituency. SEDs are sorted by lower House district name and then allocated a code starting from 0001.
<i>Vic.</i>	In Victoria, the Legislative Council (upper House) Provinces are obtained by amalgamating the Legislative Assembly (lower House) electoral districts. The SED classification provides information on both of these Houses. The four-digit code comprises a lower House code (digits 1–2) and an upper House code (digits 3–4). Upper House Province names are recorded in brackets after the lower House district names.
<i>Qld</i>	Queensland has only one house of Parliament (the Legislative Assembly) with each member representing an electoral district. These districts are equivalent to divisions in this classification. SEDs are sorted by name and then allocated a code starting from 0001.
<i>SA</i>	Like New South Wales, in South Australia, there are two Houses of Parliament but only the House of Assembly (lower House) electoral districts are represented in the SED classification since the Legislative Council (upper House) is a single constituency. SEDs are sorted by lower House name and then allocated a code starting from 0001.

SED names and codes  
*continued*

WA	In Western Australia, Legislative Council (upper House) regions are obtained by amalgamating the Legislative Assembly (lower House) electoral districts. Only lower House districts are represented in the SED classification. SEDs are sorted by lower House name and then allocated a code starting from 0001.
Tas.	In Tasmania, multiple members are returned to the House of Assembly (lower House) electorates and the Legislative Council (upper House) divisions are obtained by subdividing the lower House Divisions. Information on both Houses is provided by the SED classification. The four-digit code comprises an upper House code (digits 1–2) and a lower House code (digits 3–4). Tasmanian lower House names are recorded in brackets after upper House names.
NT	In the Northern Territory, there is only one House of Parliament, the Legislative Assembly, the electorates for which are equivalent to the divisions in the SED classification. SEDs are sorted by name and then allocated a code starting from 0001.
ACT	In the Australian Capital Territory there is only one House of Parliament, the Legislative Assembly, the electorates for which are equivalent to the divisions in the SED classification. SEDs are sorted by name and then allocated a code starting from 0001.
OT	There are no State Electoral Boundaries for Other Territories.

Examples:

1 0001 Albury  
 1 0002 Auburn  
 ...  
 2 0115 Albert Park (Monash)  
 2 0214 Altona (Melbourne West)  
 ...  
 3 0001 Albert  
 3 0002 Algester  
 ...  
 4 0001 Adelaide  
 4 0002 Ashford  
 ...  
 5 0001 Albany  
 5 0002 Alfred Cove  
 ...  
 6 0101 Apsley (Bass)  
 6 0105 Apsley (Lyons)  
 ...  
 7 0001 Arafura  
 7 0002 Araluen  
 ...  
 8 0001 Brindabella  
 8 0002 Ginninderra

Please see Chapter 8, p.27 for a full listing of SED codes and names.

Maintenance SEDs are only defined in the census year. Thus, any boundary changes that occur in official electoral boundaries will not be reflected until the next census. However, CD based concordances will be produced as redistribution of State Electoral boundaries become effective.

## CHAPTER 4

## POSTAL AREAS

### GENERAL DESCRIPTION

A Postal Area (POA) is created by allocating whole CDs to Australia Post postcode areas using the methods described in Chapter 1, p.5. Thus, census data are correct for the POA but the POA only approximates the area covered by the postcode.

Allocations have been determined using the best available information on postcode boundaries. Unfortunately, official maps of postcode boundaries have not been updated since the early 1990s and none of the more recent digital interpretations have been endorsed by Australia Post. Therefore, users should be aware of the limitations of the POA classification.

Some Australia Post postcodes are not included in the POA classification. For example, in some cases there is no CD which can be allocated to a particular Australia Post postcode. This occurs in two cases:

- where a CD covers two or more whole postcodes, the CD can only be allocated to one; or
- where more than one CD partially covers a postcode but all the CDs are allocated to other postcodes with which they also share area.

For the 2001 Census, 2,435 POAs are defined to cover the whole of geographic Australia. POAs may cross State/Territory borders and where this happens, standard census products will provide data for the whole POA.

### POA codes

POAs are not allocated names since there is no standardised name available for Australia Post postcodes. The coding conventions are as follows:

- each POA code is the same as the corresponding four-digit Australia Post postcode; and
- a POA code ending in 999 is reserved for those States/Territories that have Shipping, Off-Shore Areas and Migratory CDs.

Example:

3000

3002

3003

3004

...

3999 (Vic. Off-Shore, Shipping & Migratory)

Australia Post postcodes have changed since the 1996 Census and therefore those used in the POA listing for the 2001 Census may not necessarily match those used for the 1996 Census.

Please see Chapter 8, p.32 for a full listing of POA codes.

POA codes <i>continued</i>	Australia Post postcodes which are not street delivery areas are not represented in the POA Classification. These include post office boxes, mail back competitions, large volume receivers and specialist delivery postcodes. These postcodes have not been represented in the POA Classification because they are only valid for postal addresses and are not a valid location for population data. Appendix 1 lists those Australia Post postcodes which are street delivery areas but which are not represented in the POA Classification.
Maintenance	Australia Post postcode codes and boundaries change over time but POAs are only defined in the census year. Thus, any boundary changes that occur in postcode boundaries will not be reflected until the next census.

## CHAPTER 5

## STATE SUBURBS

### GENERAL DESCRIPTION

A State Suburb (SSC) is formed by allocating CDs using the methods described in Chapter 1, p.5 to localities gazetted by the Geographic Place Name authority in each State/Territory. For the 2001 Census, SSCs are only available within the following areas:

#### New South Wales

- Sydney and surrounds (11006–13631)
- Central Coast and surrounds (15006–15376)
- Newcastle and surrounds (16006–16486)
- Wollongong and surrounds (17006–17276)

#### Victoria

- Melbourne and surrounds (21006–22726)
- Geelong and surrounds (26006–26146)
- Ballarat and surrounds (27006–27116)
- Bendigo and surrounds (28006–28116)

#### South Australia

- Adelaide and surrounds (41006–42866)

#### Western Australia

- Perth and surrounds (51006–52536)

#### Tasmania

- Hobart and surrounds (61006–61356)
- Launceston and surrounds (62006–62126)
- Devonport and surrounds (63006–63031)
- Burnie and surrounds (64006–64086)

#### Northern Territory

- Darwin and surrounds (71006–71176)
- Palmerston and surrounds (72006–72056)

For the 2001 Census, 2,027 SSCs are defined including one 'unclassified' suburb that occurs in every State/Territory. SSCs do not cross State/Territory borders.

## GENERAL DESCRIPTION

*continued*

In the Australian Capital Territory and parts of Queensland and the Northern Territory, Statistical Local Areas (SLAs) approximate suburb boundaries. Users wanting to obtain data on suburb boundaries for these areas can refer to *Statistical Geography Volume 1 Australian Standard Geographical Classification (ASGC)* (Cat. no. 1216.0) which contains the SLA classification. Advice should also be sought from the relevant ABS regional office to determine whether it is appropriate to use an SLA boundary as a suburb boundary.

### SSC names and codes

SSC names are based on the most recent gazetted locality boundaries current at the time of census. The coding conventions for SSCs are as follows:

- SSCs are sorted by name and then allocated a unique four-digit code;
- codes are allocated within regions within each State/Territory (e.g. Sydney, Wollongong);
- unique Australia-wide identification of SSCs requires a five-digit code comprising State/Territory code (digit 1) and SSC code (digits 2–5); and
- the SSC code 9999 is reserved for those CDs in each State/Territory that are not classified as part of any SSC.

Example:

5 1006 Alexander Heights

5 1011 Alfred Cove

5 1016 Alkimos

5 1021 Applecross

5 1026 Ardross

...

5 9999 Unclassified WA

SSCs have been renumbered since the last census so the codes used for the 1996 Census will not match those used for the 2001 Census. It should also be noted that the coverage of SSCs has increased since the 1996 Census.

Please see Chapter 8, p.37 for a full listing of SSC codes and names.

### Maintenance

Suburbs will change over time but the SSC classification will not be updated until the 2006 Census.

## CHAPTER 6

## AUSTRALIAN INDIGENOUS GEOGRAPHICAL CLASSIFICATION

### GENERAL DESCRIPTION

The Australian Indigenous Geographical Classification (AIGC) aims to provide a geographical standard for the publication of statistics about the Indigenous population of Australia.

The first edition of this classification was produced for the 1996 Census. The classification comprises four levels of geographic units in a single hierarchy, the smallest unit being the Census Collection District (CD). CDs aggregate to form Indigenous Locations (ILOCs) which in turn aggregate to form Indigenous Areas (IAREs) which then aggregate to form the Aboriginal and Torres Strait Islander Commission (ATSIC) Regions (AREGs). At each level of the hierarchical structure, the component spatial units collectively cover the whole of geographic Australia without gaps or overlaps.

AREGs can cross State/Territory borders. For example, the AREG Queanbeyan crosses the borders of New South Wales, the Australian Capital Territory and Jervis Bay Territory (Other Territories).

Statistics from the 2001 Census are available for all levels of the classification.

The three Indigenous Geographic units are described below. For a detailed description of CDs, please refer to *Statistical Geography Volume 1 Australian Standard Geographical Classification (ASGC)* (Cat. no. 1216.0).

### ATSIC REGIONS

#### General Description

An official ATSIC Region is a legally prescribed area for the purposes of administration by ATSIC and the Torres Strait Regional Authority, and for the election of their members. The official ATSIC Regions used as a basis to create this classification were those current in 1999.

For this classification, CD derived ATSIC Regions (AREGs) are created by the ABS using the methods described in Chapter 1, p.5. However, CDs were redesigned for 2001 to provide a better fit with official ATSIC Region boundaries. Generally, official ATSIC Regions and CD boundaries now coincide and the CD derived AREG boundaries are, in most cases, identical to the official boundaries.

#### AREG names and codes

For the 2001 Census, 37 AREGs are defined to cover the whole of geographic Australia. This figure includes the 35 named ATSIC Regions, the Torres Strait Area and a region named 'ATSIC Region Not Defined'. This latter comprises CDs in the Territories of Christmas Island and Cocos (Keeling) Islands and those classified as Off-Shore, Shipping & Migratory.

The AREG names used in the classification are the same as those determined for the official area by the relevant legislation. Each AREG is allocated a two-digit code starting from 01. The AREG code 99 is reserved for the 'ATSIC Region Not Defined'.

AREG names and codes *continued* The AREG codes are unique throughout Australia and except for the addition of the 'ATSIC Region Not Defined', have not changed since the previous census.

Example:

33 Apatula  
34 Nhulunbuy  
35 Tennant Creek  
36 Darwin  
99 ATSIC Region Not Defined

## INDIGENOUS AREAS

**General Description** An IARE is a medium sized spatial unit which enables the production of detailed census statistics relating to Indigenous people while maintaining the confidentiality of individuals. They generally include around 280 Indigenous persons and comprise one or more Indigenous Locations.

For the 2001 Census, 563 IAREs are defined. Two IAREs are defined for the Territories of Christmas Island and Cocos (Keeling) Islands, and Off-Shore, Shipping & Migratory within the AREG 'ATSIC Region Not Defined'.

**IARE names and codes** The IARE name allocated by the ABS is based upon a distinctive name for the area which the boundary encompasses. Equivalent ASGC names are used where the area concords exactly. The code structure for the IAREs has been changed for this edition with a three-digit code being allocated to each IARE within a AREG. IARE codes must include the AREG code to be fully unique within the classification.

Example:

16 001 Cardwell (S)  
16 005 Hinchinbrook  
16 010 Palm Island  
...  
25 001 Port Hedland  
25 005 Port Hedland (T): excl. Port Hedland  
25 010 Karratha

## INDIGENOUS LOCATIONS

**General Description** An ILOC is an area designed to allow the production of summary census statistics, in particular those relating to Indigenous people while maintaining the confidentiality of individuals. Generally, an ILOC includes at least 50 Indigenous people and can comprise one or more CDs.

For the 2001 Census, 977 ILOCs are defined. Two ILOCs are defined for Christmas Island and the Cocos (Keeling) Islands, and the Off-Shore, Shipping & Migratory CDs within the AREG 'ATSIC Region Not Defined'.

ILOC names and codes    The ILOC name allocated by the ABS is based upon a distinctive name for the area which the boundary encompasses. Equivalent ASGC names are used where the area concords exactly. The code structure for this edition has been changed with two-digit codes being allocated to each ILOC in an IARE beginning at 01. ILOC codes must include the IARE and AREG code to be fully unique within the classification.

Example:

23005 01 Newman

23005 03 Punmu

23005 05 Kunawarriji

23005 07 Parnngurr

23005 09 Nullagine

23005 11 East Pilbara (S) east: rem.

Please see Chapter 8, p.58 for a full listing of AREG, IARE and ILOC codes and names.

Maintenance    For this edition of the classification, the IAREs and ILOCs were redesigned and a new coding system used. The AIGC is only defined in the census year. Thus, any boundary changes that occur in official ATSIC Region boundaries will not be reflected until the next census. However, CD based concordances will be produced should such changes occur.

# CHAPTER 7

# JOURNEY TO WORK

## GENERAL DESCRIPTION

Journey to work (JTW) data provide information about where people work rather than where they reside. This information is used by State Transport Authorities to assist with planning transport systems in their State or Territory.

JTW data have been produced from the Census of Population and Housing since 1971. The geographical areas are redefined each census to take into account changes and growth that occur over time in the States and Territories. As a result, the data are not comparable across censuses. For the 2001 Census, the geographic scope was widened to include the whole of geographic Australia (excluding the external territories of Jervis Bay, Christmas Island and Cocos (Keeling) Islands). Thus, the applicable population for JTW data has increased to allow a more comprehensive view of work-related transport patterns across Australia.

For the 2001 Census, each State/Territory is divided into JTW Study Areas (JTWSAPs). JTWSAPs are of two types, the JTW Detailed Study Area, which contains the major urban areas, and the JTW Extended Study Area which comprises the remainder of the State/Territory.

The JTW Detailed Study Areas are further subdivided into JTW Destination Zones (JTWDZNPs). JTWDZNP boundaries do not coincide with CD boundaries but they do aggregate to ASGC Statistical Local Areas (SLAs). The JTW Extended Study Area covers all remaining SLAs for the State/Territory.

To assist ABS clients in understanding JTW data, listings of SLAs and the JTWDZNPs they incorporate are available from the ABS National Information and Referral Service. However, the JTWDZNP boundaries are determined by Road Transport Authorities. Clients who would like to obtain these boundaries in digital or mapped form should contact the Road Transport Authority in the relevant State/Territory or, for Tasmanian data, the ABS Tasmanian office (see Appendix 2 p.84 for a list of contacts).

JTW names and codes     JTW SAP names are allocated for each State/Territory. The JTW Detailed Study Area is allocated a code of 1 preceded by the relevant State code. The JTW Extended Study Area is allocated a code of 2 preceded by a State code.

Example:

11 NSW JTW Detailed Study Area

12 NSW JTW Extended Study Area

JTWDZNP codes are not allocated names. The coding conventions are as follows:

- within a JTW Detailed Study Area, a ten-digit code is assigned comprising State/Territory code (digit 1), Study Area code (digit 2), SLA code (digits 3–6) and JTWDZNP code (digits 7–10); and
- within a JTW Extended Study Area, a ten-digit code is assigned comprising State/Territory code (digit 1), Study Area code (digit 2), SLA code (digits 3–6) and the reserved JTWDZNP code 9000 (digits 7–10).

JTWDZNP codes are not unique unless they are used in conjunction with their associated JTW SAP and SLA codes.

Note that some SLAs within the JTW Extended Study Area have been divided into more than one JTWDZNP. In these cases the reserved JTWDZNP code 9000 has been replaced with a unique four-digit number for each part of the SLA.

Maintenance     JTW SAPs are defined for each census to accommodate changes that occur in each State/Territory. The next set of areas will be defined at the time of the 2006 Census.
